

Preparing for Planting Sugarcane

Step 1

Find a sunny spot
Find a sunny position that won't get watered by the pop-up sprinklers

Step 2

Clear the surface

Use a shovel and scrape the grass, weeds and roots off the surface

Step 4

Smooth the ground off

When soft enough use a garden rake to smooth the ground off

Step 3

Dig a metre by metre area

Push the shovel down in the soil to where the handle meets the top of the digging point and turn the soil over until the ground is soft all the way through
You might need to wet the ground first if the ground is too hard or use a mattock

You are ready for planting
